Spectral lighting simulation

Applications of spectral light simulation

- Color appearance of interiors
- Agriculture
- Human health

Research on accurate simulation of color indoors

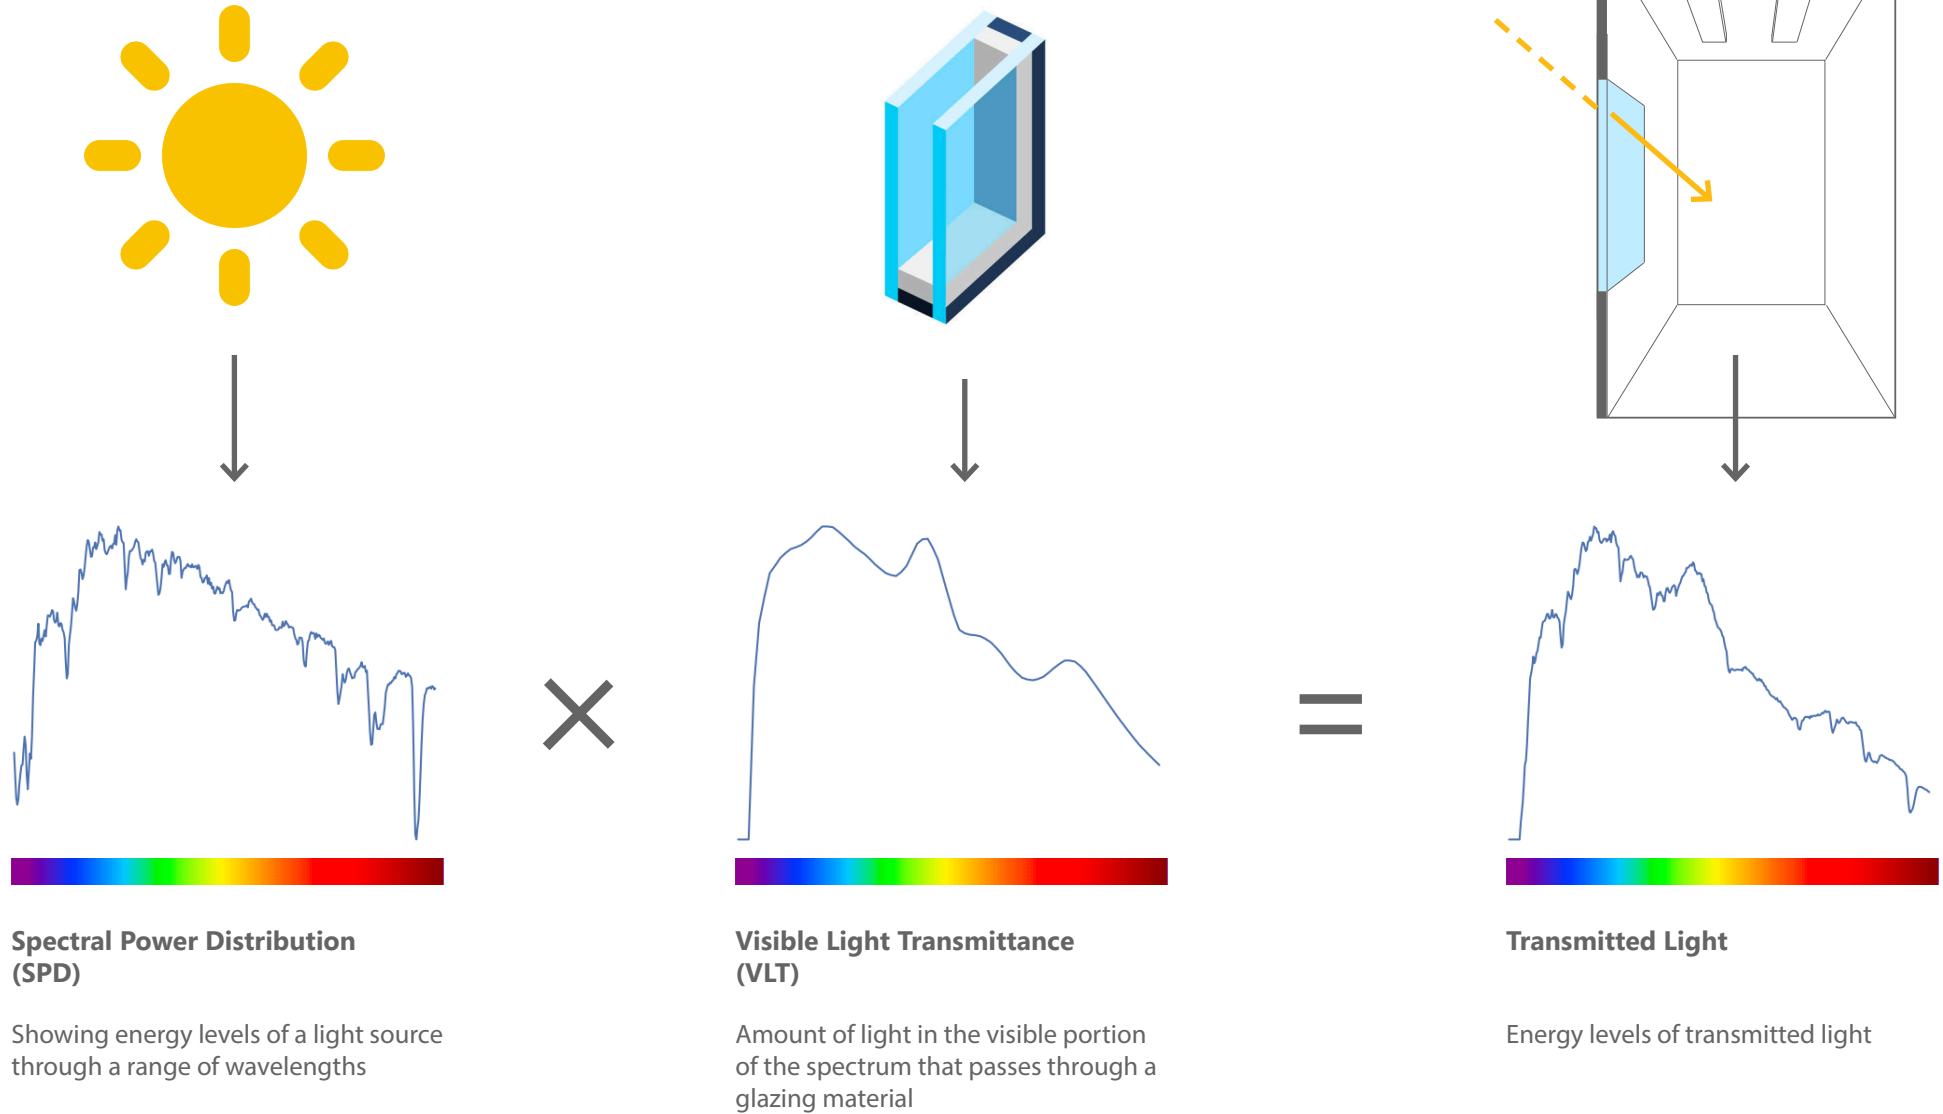

Project goal to further development of LARK multispectral simulation tool

Contents

1. Spectral Interaction with daylight
2. How is this implemented in LARK
3. Improvements in LARK and why is it important?
4. Predicting color of the sun

Spectral Interaction with daylight

Spectral Interaction with daylight - example

Spectral Power Distribution (SPD)

Showing energy levels of a light source through a range of wavelengths

Spectral Interaction with daylight - example

Visible Light Transmittance (VLT)

Amount of light in the visible portion of the spectrum that passes through a glazing material

Spectral Interaction with daylight - example

Spectral Interaction with daylight - example

Spectral Reflectance

wavelengths of light that reflect off a surface

Spectral Interaction with daylight - example

Spectral Interaction with daylight - example

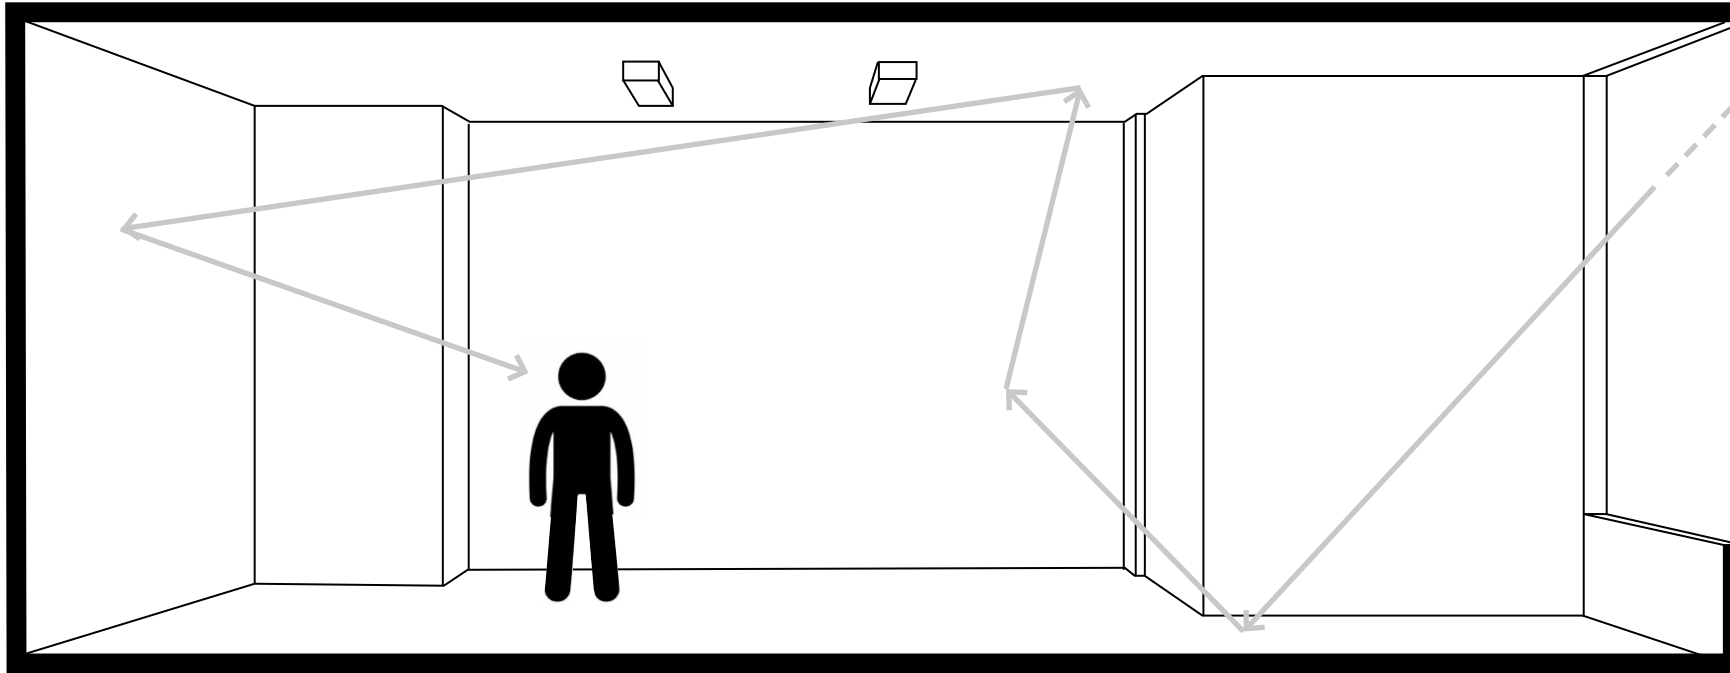

Spectral Reflectance

wavelengths of light that reflect off a surface

Spectral Interaction with daylight - example

Spectral Interaction with daylight - example

Reflected Light Entering eyes
Energy level of reflected light entering our eyes

Spectral Interaction with daylight

Light entering eyes

Light is processed through light sensitive cells (rods, cones, ipRGCs)

These cells contain proteins that interact with light- sensitive chemicals to enable vision, circadian rhythms, and other light-induced neuro-endocrine responses

Opsin 1 (Photopic)

Visual Sensitivity to Light

Opsin 4 (Melanopic)

Non-visual Sensitivity to Light

Regulates sleep-wake cycle & Alertness

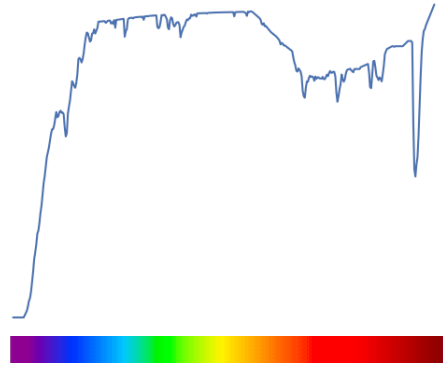

Opsin 5 (Neuropic)

Regulates temperature and metabolic rate

Together, inputs from opsins regulate neuro-endocrine responses in our body

Spectral Interaction with daylight

Reflected Light Entering eyes

Energy level of reflected light entering our eyes

LARK

LARK Input

1 Light Source

- Sky
- Electric Light

Spectra

Simplified Color (3c or 9c)

3-channel sky

OR

9-channel sky

3-channel material

OR

9-channel material

2 Material

- Surface Reflectivity
- Window Transmissivity

3 Geometry

Radiance Simulation

LARK Output

Opsin 1 (Photopic)

- Visual Sensitivity
- Color Sensitivity
 - Brightness of scene

Opsin 4 (Melanopic)

- Non-Visual Sensitivity
- Entraining Circadian System
 - Regulating physio-endocrine system

Opsin 5 (Neuroptic)

Point Based

Image Based

100 10000

LARK v1.0

Correlated Color Temperature in K (Kelvin)

1 Sky (Diffuse horizontal)

5600 K

2 Sun (Direct Solar)

5500 K

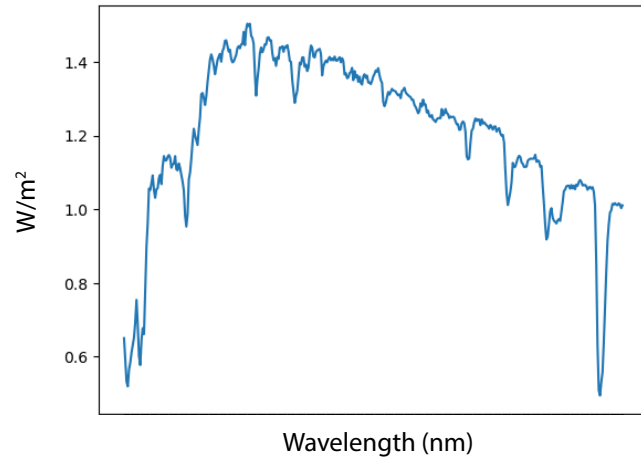

LARK v3.0

Correlated Color Temperature in K (Kelvin)

1 Sky (Diffuse horizontal)

5600 K

2 Sun (Direct Solar)

4250 K

Spectral Sky + Sun - why is it important?

June 21 10am - Clear Sky

No Color

Colored Sky (V.0)

Sun

Radiance Simulation

Conclusions

- LARK v3.0 scheduled to be realised by June 15th
- Conference paper for IBPSA
(Jung BY, Cheng Z, Brennan M, Inanici M. Multispectral Lighting Simulation Approaches for Predicting Opsin-driven Metrics and their Application in a Neonatal Intensive Care Unit. Paper presented at: 18th International IBPSA Conference and Exhibition; 2023 Sept 4-6; Shanghai, China.)
- Color of the sun largely impacts quality of light and finding the variability of sunlight is a major contribution to the scientific community
- This finding is going to be submitted for publication in LEUKOS -Journal of Illuminating Engineering Society
(Jung BY, Brennan M, Inanici M. Variability of sun spectra: findings from collected data. Leukos, the Journal of the Illuminating Engineering Society)
- Acknowledgement - sky spectra data collected on Gould Hall funded by UW & ARC
- Continuing this research for my PhD

Next Steps

- Add sample database for sun spectra based on CCT
- Create LARK tutorial videos

LARK

SPECTRAL LIGHTING

v3.0
